Math Be A Winner!  **It's Fun To Play!**

we-go™

"WE-GO" Math™ board game uses a new versatile approach to teaching and learning math.

Object: First player to reach a goal of 500 or more wins the game and yells "WE-GO!"

Needed to play: 1 dice - playing pieces (pawns) - paper (score sheets) - pencils

To start: Each player selects a playing piece and places it on any one of the 4 start positions on the board.
Each player rolls one dice - highest number plays first.

To play: Players roll the one dice in successive (clockwise) turns. After each roll, the number on the dice is the number of spaces to move your playing piece, either clockwise or counter-clockwise. Players can not land on a number occupied by another player. If you are out of options you must GO to the nearest start position. Then it is the next person's turn.

Scoring: Record the number value of the square landed on using your score sheet. In later turns, players add each number landed on to their running totals. First player to reach a suggested goal of 500 points or more wins the game and yells "WE-GO!"

For a greater degree of difficulty: (A) Time limit: Player winning the most games in a half hour wins.

(B) The goal of 500 points must be reached exactly and not surpassed. This can be accomplished by not adding a number landed on to surpass the goal of 500 points.

(C) Use 2 dice: The dice may be added or subtracted to determine the number of spaces to move your playing piece.

You can not use subtraction to remain on a letter if you roll doubles -  - (both dice having the same number).
